How to reinstall OS

You can do it yourself

Go to [VPS hosting](#) page and select the server for which you want to reinstall the operating system

The screenshot shows a management interface with a sidebar on the left and a main content area. The sidebar has sections for 'Client', 'Products/Services', and 'Billing'. The main content area has a toolbar with icons for 'Order', 'Edit', 'Reboot', 'IP addresses', 'Renew', 'Change tariff', 'History', 'Instructions', 'Question', and 'To panel'. Below the toolbar is a table with the following data:

Id	Main IP	Hostname	Tariff plan	Data center	End date	Status
182145	91.221.37.242	s182145.cloud.flynet.pro	Cloud VPS 1	Флайнет	2020-02-25	Active

A red box highlights the first row of the table, and a red arrow points to it with the text "Select the server for which you want to reinstall the operating system".

and click the Edit button

The screenshot shows the same management interface as the previous one. The 'Edit' button in the toolbar is highlighted with a red box, and a red arrow points to it with the text "click the change button". The table below the toolbar is the same as in the previous screenshot.

Next, select from dropdown menu new operating system you want to install
